DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Claims 1 and 5 recites the limitation "the transmission" in lines 4 and 3, respectively.

There is insufficient antecedent basis for this limitation in the claim.

Further, the claims do not recite which transmission, uplink or downlink, is the one with power control.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

Art Unit: 2682

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

5. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Parmenter, US Pat 6,615,052.

Claims 1 and 5: Parmenter discloses a method and cellular system (col 4 lines 2-10), comprising a base station communicating with at least one mobile station (col 5 line 66-col 6 line 26), wherein transmissions may include two services (voice and data), and wherein power levels are raised and lowered and each service has its own maximum and minimum levels (col 4 lines 20-39, col 6 lines 27-49, col 7 lines 23-62). **Claim 3:** Parmenter discloses that the values may be changed independently. **Claim 4:** the power levels S1 and S2 would inherently comprise an offset value, being a difference from the maximum or minimum values.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Parmenter.

Parmenter discloses applicant's invention of claim 1 as shown above, but fails to expressly disclose that the maximum and minimum values may be the same for the data and

Art Unit: 2682

voice services. However, Parmenter does disclose that the maximum and minimum values vary based on traffic, BER and other variables, and as such one of ordinary skill in the art at the time of the invention would have recognized that and instance could obviously occur when the values are equal.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mitra, EP 0863 619 discusses a wireless network with power ranges for data, voice and text services.

Sawyer discusses different power values for analog and digital services.

Willenegger, Nystrom, Kang, Ayyagari and Lundby discuss power control.
